QA Lead / Lead SDET | AI-Driven Test Automation | Cloud-Native Quality Engineering

Senior QA Lead / SDET with **13+ years of experience** building scalable automation frameworks and leading quality engineering for cloud-native systems.

Expertise in **Selenium, Playwright, Java, TypeScript, API testing, and cloud platforms (OCI, AWS)**. Specialized in AI-enhanced automation frameworks, including intelligent test generation, self-healing systems, predictive test selection, and AI-based failure analysis.

Proven track record of **improving regression efficiency by ~50%, reducing infrastructure setup time by 70–80%**, and driving automation adoption across large-scale distributed systems.

CORE SKILLS

QA Leadership & Strategy: Test Strategy, Automation Roadmaps, Agile/Scrum, Stakeholder Management, Cross-team Leadership

Automation & Testing: Selenium, Playwright, Java, TypeScript, Python, TestNG, JUnit, REST Assured, Cucumber (BDD), UI/API Testing, Microservices Testing

AI in Testing: Designed and implemented an AI-augmented test automation framework leveraging Playwright and LLM APIs, Self-healing test mechanisms with fallback locator strategies and dynamic element handling, and NLP-based failure analysis with intelligent reporting.

Cloud & DevOps: OCI, AWS, Kubernetes, Terraform, Docker, Helm, CI/CD (Jenkins, GitHub Actions, GitLab CI)
Systems & Tools: Linux, Bash/Python scripting, Debugging, Log Analysis, Git, Postman, Grafana, DynamoDB, MongoDB, Postgres

AI-DRIVEN AUTOMATION & INNOVATION

- Built AI-enhanced automation frameworks integrating test generation, test data creation, and self-healing mechanisms, **reducing maintenance overhead by ~30%**
- Leveraged GitHub Copilot** for test case generation, POM design, and data-driven testing, accelerating development
- Implemented **AI-based failure analysis and intelligent reporting** integrated into CI/CD pipelines
- Applied predictive test selection & **NLP-based log analysis to identify flaky tests** and optimize regression cycles
- Designed resilient systems with **fallback and mocking strategies** to ensure execution stability

KEY PROJECTS

AI-Powered UI Automation Framework (Playwright + TypeScript)

GitHub: github.com/aroragaurav2810/ui-automation-framework-ai-copilot-playwright-typescript

- Built production-grade automation framework with AI-generated test cases, test data, and Page Object Models
- Integrated CI/CD pipelines (GitHub Actions) with automated test suite execution on PR/push events
- Implemented self-healing capabilities using fallback and mocking techniques, improving test stability
- Containerized framework using Docker and Kubernetes for scalable execution
- Improved automation development speed and reduced manual effort by ~30%

Terraform Infrastructure Automation Framework

GitHub: github.com/aroragaurav2810/terraform-demo-infra-setup

- Built a Terraform-based demo lab solution to provision cloud environments for testing and demonstrations.
- Leveraged Terraform scripts for infrastructure provisioning, reducing setup time by 70–80%.
- Utilized extensive shell scripting to configure resources, significantly minimizing manual effort.
- Enabled consistent environment provisioning for complex integrations (OID, OUD, EBS, AD, NetSuite, etc.).

KEY ACHIEVEMENTS

- Received **Employee Recognition Award (2025) at Oracle** for exemplary initiative in taking ownership beyond defined project scope
- Received **Star Award (2021) at IHS Markit** for outstanding performance and contribution
- Received **Star Award (2016) at Sirion** for outstanding performance and contribution
- Improved regression efficiency by ~50% through scalable automation frameworks
- Reduced infrastructure provisioning time by 70–80% using Terraform
- Reduced test maintenance effort by ~30% using AI-driven automation
- Enabled faster release cycles through CI/CD-integrated testing

- Built and scaled Kubernetes-based test environments for microservices.

CERTIFICATIONS

- **Claude 101 (2026)** — [View Badge](#)
- **Claude Code in Action (2026)** — [View Badge](#)
- **OCI AI Foundation Associate (2025)** — [View Badge](#)
- **OCI Foundation Associate (2022, 2023)** — [View Badge](#)
- **Oracle Java Certified (2017)** — [View Badge](#)

PROFESSIONAL EXPERIENCE

Oracle | Principal Member of Technical Staff — QA Lead / Lead SDET

Sep 2022 – April 2026

- Owned end-to-end QA strategy for a cloud-native identity governance platform (AGCS), improving release stability and enabling reliable deployments across distributed OCI environments
- Designed and implemented AI-driven, self-healing automation architecture (Playwright, Selenium, API) incorporating intelligent test generation, fallback/mock strategies, and failure analysis, reducing test flakiness and maintenance overhead by ~30%
- Built AI-powered automation frameworks and data-driven testing solutions leveraging OCI services for large-scale data validation, while leading QA teams and driving adoption across 100+ OCI teams
- Built and optimized UI (Playwright + TypeScript) and API automation frameworks, integrated with CI/CD pipelines (GitHub Actions), enabling continuous testing and faster feedback cycles
- Improved regression efficiency by ~50% through parallel execution strategies, optimized test suites, and data-driven testing approaches
- Reduced infrastructure provisioning time by 70–80% by designing Terraform-based environment automation, enabling consistent and on-demand test environments
- Performed Kubernetes-based microservices validation and distributed system debugging, leveraging Linux, logs, and monitoring tools to identify and resolve system-level issues
- Led and mentored QA engineers, driving automation best practices, code quality, and AI adoption, while aligning testing strategy with product and engineering goals
- Automated end-to-end validation of identity connectors (OID, OUD, EBS, Active Directory, NetSuite, Fusion, DB systems), ensuring reliability of aggregation, provisioning, and access workflows

S&P Global (IHS Markit) | Senior QA Engineer / Lead

May 2017 – Sep 2022

- Led automation initiatives for high-scale financial platforms, improving regression efficiency by ~50%
- Built scalable UI/API automation frameworks using Selenium, Java, TestNG, BDD
- Implemented mock-based testing frameworks, improving CI/CD reliability
- Developed backend validation systems leveraging AWS (Lambda, DynamoDB, ECS)
- Enhanced release quality through CI/CD integration and continuous testing

SirionLabs | Senior Test Engineer

Dec 2014 – May 2017

- Developed automation frameworks for UI and backend systems
- Optimized regression cycles through parallel execution
- Validated workflows for AI-based contract management platform

CyberQ Consulting (Client: NIC) | Software Test Engineer

May 2013 – Nov 2014

- Built automation frameworks and performed API/database validation for government systems

Eastern Horizon Solutions | Software Tester

May 2012 – Apr 2013

- Performed manual and regression testing for e-commerce applications

EDUCATION

B.Tech in Computer Science Engineering — MDU (Maharshi Dayanand University), 2012
